

Jens Myrup Pedersen is Associate Professor at Aalborg University. His research is mainly focused on detection of malicious activity in computer networks, where he is working on a number of Danish and European research projects. Together with students and PhD students, he is behind the development of Haaukins, which is a highly automatised virtual environment for cyber security training, as well as other virtual environments for cyber security training and research. He is member of the Danish Council for Digital Security, and also of the Advisory Board for Center for Strategic Cyber Competences.
